"Gold & Middle East: 11-Year Cycle in 2019/20 II"

Outlook 2019/2020 The 80-Year Cycle

10-30-19 - The *40-Year Cycle* has powerfully reinforced its ubiquity and accuracy, right up to the present day. While many of the events about to be discussed might be debated as to their individual impact or significance, they combine with so many corroborating events to create a synergy that cannot be refuted.

So how do the intensifying wildfires in California, the US pullout from Northern Syria (catapulting Turkey into the most decisive period in their recent history), the unresolved trade war with China, and the continued ascent in Gold - not to mention dozens of other seemingly unrelated occurrences - reinforce this uncanny 40-Year Cycle?

If they are somehow linked, what does that signify?

America's Trio of 80YCs

In articles over the past decade, I have detailed the *40-Year Cycle* that has governed America's entire existence - incorporating everything from currency to conflict to agricultural development and shifts.

Global gold and currency action - dating back to (at least) the 1200's has adhered to that cycle. *That cycle projected a momentous shift for 2017 - 2021.*

A higher-magnitude *80-Year Cycle* has timed the bigger, over-arching evolutions - most notably America's involvement in major wars (1781 - 1861 - 1941 - **2021?**).

That *80-Year Cycle of War* has also governed European conflict - prior to and overlapping America's existence as a nation - dating back hundreds of years prior to 1781.

As discussed in 2013 - 2015, that *80-Year Cycle*

has also timed larger migration shifts in America - tied to agriculture (and gold)... This is just one subtle validation of the dramatic shift expected to take hold as America's third *80-Year Cycle* culminates.

There are other 'seeds of change' that confirm related *80-Year Cycles* and portend dramatic changes in the '20's. *Stay tuned... IT*

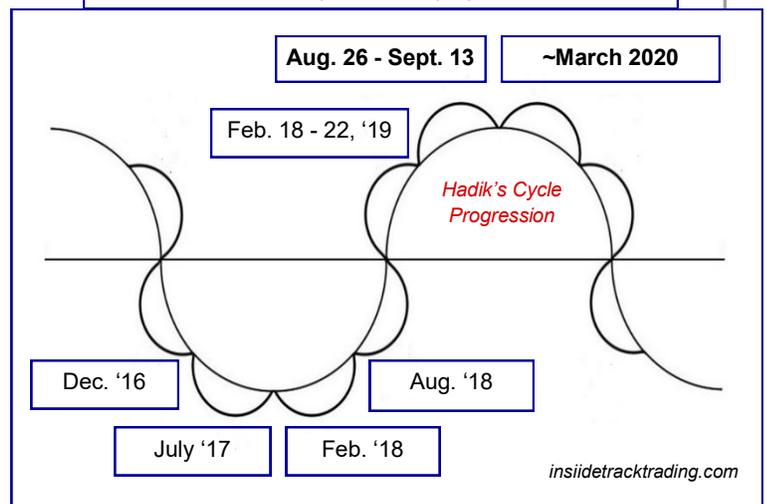

INFLATION MARKETS - METALS

10/31/19 - GOLD & SILVER have been in a period of consolidation since peaking in **late-Aug./early-Sept.** while fulfilling and perpetuating an uncanny web of weekly cycles that has governed Gold since before its 3Q 2011 peak.

This web includes larger-magnitude cycles of ~112 weeks and 54 - 59 (~56) weeks in duration.

That *112-Week Cycle* timed the 2011 - 2015 decline and portends a subsequent peak in **~March 2020**.

27 - 29-Week (~6.5 Month) Cycle in Gold

INSIIDE Track

“Gold & Middle East: 11-Year Cycle in 2019/20 II”

That cycle broke down into a ~56-Week Cycle (with the timing of successive turning points ranging from 54 - 59 weeks) that helped pinpoint a multi-month peak in late-Feb. '19 - projecting future highs for **March/April '20** and at the midpoint (27 - 29 weeks) in **late-Aug./early-Sept. '19**.

That 54 - 59 Week Cycle timed a series of lows in 4Q '13, 4Q '14, 4Q '15 & 4Q '16 - at intervals averaging 56 weeks each - and then projected future highs for late-Jan. '18, late-Feb./early-March '19 & **March/April 2020**.

At the midpoint of each of those ~56-week cycles came the 27 - 29 week (~28-week) cycle that last arrived in **late-Aug./early-Sept.** - 27 - 29 weeks from the late-Feb. '19 peaks and precisely when Gold, Silver & the XAU peaked two months ago...

Gold dropped precisely to its downside target (~**1467.0/GCZ**) and has since rebounded. While that was occurring, Silver and the XAU also pulled back and twice neutralized their weekly uptrends but did NOT turn those trends down. That projected rallies back to their late-Aug./early-Sept. highs...

From a price & wave perspective, Silver has entered a '5th' wave advance from its Nov. '18 low - with the recent Oct. '19 low representing the '4th' wave low and onset of the ensuing '5th' wave advance...

The **XAU** precisely fulfilled its downside objectives, completing a projected drop to **86.00 - 86.80/XAU** while perpetuating an 18 - 19 week low-low-(low) Cycle Progression.

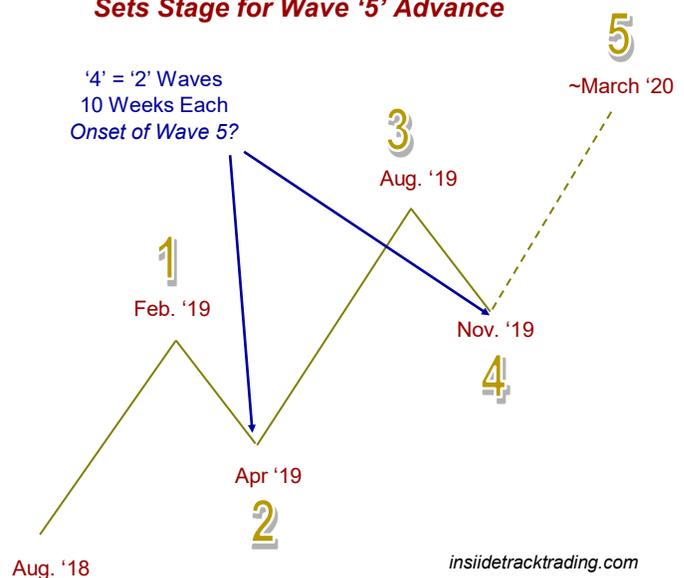

In doing so, the XAU neutralized its weekly uptrend multiple times but did not turn that trend down. That was/is the ideal scenario for a multi-month low and a subsequent rally back to its late-Aug. high (**102.29/XAU**).

Like Silver, the XAU is tracing out a textbook Elliott Wave formation with the Oct. low representing the '4th' wave low of an overall 5-wave advance... Its intra-year & 6 - 12 month *LLH* objective is at **107.83/XAU** (65.85 low - 86.84 low - 107.83 projected high).

The XAU's recent '4th' wave decline almost perfectly matched the magnitude of the previous '2nd' wave decline - providing additional corroboration to this wave interpretation. [Feb. - May '19 decline ('2nd' wave) from 80.76 to 65.85 = drop of 14.91 points. Aug. - Oct '19 decline ('4th' wave) from 102.29 to 86.84 = drop of 15.41 points.]

Platinum fulfilled its downside expectations, dropping in early-Oct. and reaching ~**890.0/PLF** - its primary downside target. It tested and held its ascending weekly *21 High MAC* - on four successive weeks - while remaining in a weekly uptrend.

Gold Wave Structure: Nov. '19 Low = '4th Wave' Sets Stage for Wave '5' Advance

INSIIDE Track

“Gold & Middle East: 11-Year Cycle in 2019/20 II”

It remains in a bullish structure that is likely to spur a new surge into **Dec. '19** and up to **1040**, possibly **1090/PL**.

The preceding analysis is taken directly from the Nov. 2019 *INSIIDE Track* and is reprinted to update newer readers on the outlook for Gold, Silver, Platinum, Palladium and the Gold/Silver Index (XAU) to resume their multi-year uptrends (stemming from the late-2015/early-2016 lows) and continue moving higher into **late-2020**.

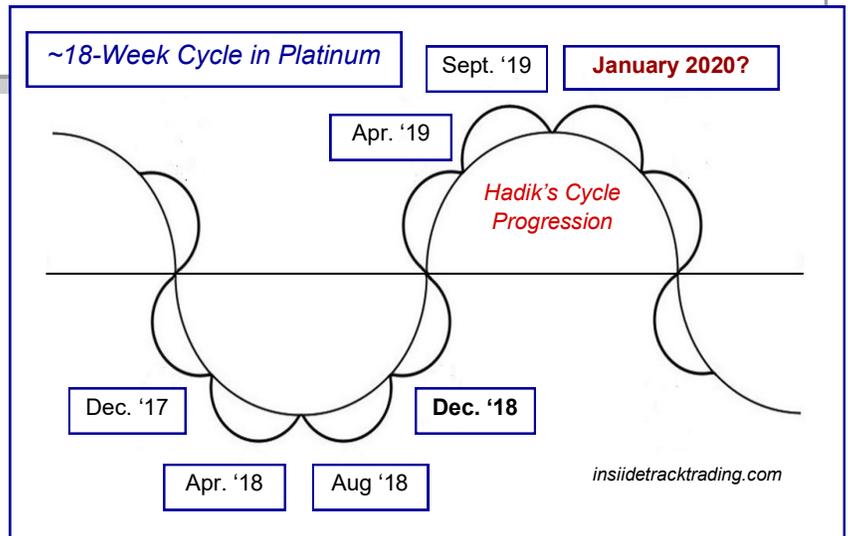

Gold, Silver and the XAU are all signaling the imminent onset of Wave #5 advances - expected to surge into **1Q 2020** and complete the overall 5-wave structure from the late-2018 lows. *(That does NOT signal the end of the overall uptrend, just the culmination of this particular phase of it.)*

One of the key price objectives for this is a 6 - 12 month *LLH* objective in the Gold/

Silver Index (XAU) - coming into play at **107.83**. That is doubly significant since it converges with the primary 1 - 2 year upside target - stemming from the Sept. '18 low - near **110.0/XAU**. As a result, the XAU has a synergistic, and potentially magnetic, upside target for the coming months - at **107.83 - 110.00**.

Based on market cycles, geopolitical cycles, Middle East cycles and solar cycles, the period of **late-2019 through late-2020** should be an 'explosive' time - likely supporting Gold through key phases of that *GaME-Changer* cycle (Gold and Middle East). *Ultimately, this should usher in War Cycles in 2021.*

INSIIDE Track will continue to update the longer-term trends and cycles while the **Weekly Re-Lay** will address the short and intermediate-term cycles, trends and trading strategies throughout this potentially volatile and uncertain period.

“Gold & Middle East: 11-Year Cycle in 2019/20 II”

Outlook 2019

The ~11-Year Cycle

02-27-19 - The Sun has at least three intriguing cycles that repeatedly emerge in the markets, in geopolitics, in military conflict, and in most aspects of life. The biggest (of these three, although there are also longer-term cycles as well) is the ~40-Year Cycle of the Great Conveyor Belt of the Sun.

To summarize it, this is the plasma flow that circumvents the Sun, moving from its equator out toward one of the poles and then - after sinking lower - back toward its equator. It takes approximately 40 years for that to transpire... and then it occurs toward the opposite pole and back.

So, a total circuit would take roughly 80 years (perfectly coinciding with the 80-Year Cycle of War that comes back into play in **2021**, linked to the US entry into WWII in 1941, into the Civil War in 1861 and out of the Revolutionary War in 1781. In the colonies, England and Europe, that has been documented for a few hundred years before 1781.).

If I understand the process correctly, the initial phase - flowing from equator to pole - goes along the surface of the Sun and ‘sweeps’ up decaying sunspots and their related magnetivity and then drops them off at the poles.

As a result, it greatly impacts the magnetic force of the Sun... which impacts subsequent sunspots and the magnetic barrages periodically flung at Earth (CMEs)... which could have an exponentially greater impact as Earth converts to a digital world.

As a result, it would stand to reason that the fluctuations of the *Great Conveyor Belt of the Sun* dramatically influence the other two primary cycles in this discussion...

Cause and Effect

Excerpt from March 2019 *INSIIDE Track*

Perhaps the best-known solar cycle is the one that governs the ebb and flow of sunspots or solar storms. It is an ~11-Year Cycle (averages out to 11.2 years) that has an uncanny knack for also linking monetary and military events of *cause and effect*. Perhaps a better way of describing that would be the *Cycle of Unintended Consequence*.

Events during one phase of this cycle often have a distinct and irrefutable link to events during the next phase. In many cases, those phases also link similar players or similar events. (I have often documented an overlapping 11-Year Cycle that impacts Middle East conflict and recurs in **2021/2022**.)

Most recently, the last two phases began with the events of 1997 - 1998 (11 years after the stock market crash of 1987) when the economic world was rocked by a pair of crises - the *Asian Financial Crisis* and the *Russian Ruble Crisis* - in 1997 & 1998.

US & Western stock markets were able to mount a final surge before a worldwide stock malaise took hold in 2000 - 2002. However, it was 11 years after the events of 1997 - 1998, in 2008 - 2009, when a larger global collapse ensued.

As time has unfolded, it has become clear the Western financial and economic collapse of 2008/2009 drove countries like China & Russia into closer cooperation with one another, as an alternative to the US & Europe... This cycle comes back into play in **2019 - 2020** and is likely to perpetuate/foster that alignment.

However, the intriguing part to me continues to be the coinciding recurrence of unrelated - *but potentially related* - cycles in Saudi Arabia (see page 3) and even in Turkey. Not surprisingly, the two most predominant cycles in those discussions are the 40-Year Cycle and an ~11-Year Cycle...

So, what could 2019 - 2020 have in store? Stay tuned. *IT*

[End of excerpt from March 2019 *INSIIDE Track*.]

INSIIDE Track

“Gold & Middle East: 11-Year Cycle in 2019/20 II”

The following are recent **Weekly Re-Lay** excerpts elaborating on this developing bottom in precious metals and the potential for a Nov. '19 low...

11/09/19 **Weekly Re-Lay**: “Gold, Silver & the XAU completed their rallies into the week of **Nov. 4 - 8**, reversing lower and selling off in line with Gold's daily & weekly trend... There are a few key takeaways from the events of the past week, each of which has an influence on future expectations:

1 - Metals turned lower at the earliest possible point (Nov. 4), exhibiting some additional weakness on a 2 - 4 week basis. Gold remained in its daily downtrend (projecting a drop to new lows) as the XAU could only make it up to **95.98**.

2 - Silver ultimately turned its weekly trend down, joining Gold and significantly reducing the potential for a retest of its high in 2019.

3 - Silver spiked into its primary (multi-month) downside target at **16.50 - 16.80/SIZ**.

#2 & #3, combined with the ongoing resilience in the XAU, usher in the potential for another multi-week low...

There are other reasons why the coming weeks could be pivotal. Most of these deal with the monthly trend, monthly cycles, monthly **21 MACs** and larger-degree wave structure - topics that are usually reserved for *INSIIDE Track*...

Gold & Silver have the potential to set a secondary (higher) low in **Nov. '19** - 1 year (360 degrees) from Silver's major low in Nov. '18. That would also perpetuate ~6-month/~180-degree low (Nov. '18) - low (May '19) - low (**Nov. '19**) *Cycle Progressions* - most obvious in Silver.

From a price/wave perspective, Silver's test of its **16.50 - 16.80/SI** downside target means it is attacking the highs of Jan. '19 - a pivotal level of 6 - 12 month *'resistance turned into support'*.

At the same time, it is completing a .618 (Golden/Fibonacci Ratio) retracement of its entire 2019 advance... AND testing the level of its monthly **21 High MAC** as that channel is flattening and beginning to turn positive.

Silver has been trading above that channel since early-Aug., so a return to it is a textbook *'test of strength'* move that should be followed by a new rally. *These are various forms of support.*

Since these are all monthly-related levels and indicators, more leeway is inherent in them. So, Silver could still see additional downside (perhaps reaching **16.50/SIZ**) before a final low takes hold...

In the case of Gold, there are multiple timing indicators that could produce an intermediate low in the coming week...

They include the potential for successive, 10-week corrections (late-Feb. - early-May and early-Sept. - **Nov. 11 - 15**) - a potential *'4th wave = 2nd wave (duration)'* prior to a *'5th wave advance*.

A low would also perpetuate a 36 - 40 day low (May 2) - low (June 11) - high (July 19) - high (Aug. 26) - low (Oct. 1) - low (**Nov. 6 - 11**) *Cycle Sequence*...

The XAU continues to validate the low it set while perpetuating an 18 - 19 week low-low-low-(low) *Cycle Progression* in October - a cycle that was fulfilled while that Index was attacking its intermediate downside target at **86.00 - 86.80/XAU** (low was **86.84/XAU**). The weekly trend pattern remains constructive, which is why the XAU could rally back to its 3Q '19 high..."

11/13/19 **Weekly Re-Lay Alert**: “Gold & Silver remain below the late-Aug./early-Sept. '19 cycle highs - peaks that were projected to hold for at least 2 - 3 months.

INSIIDE Track

“Gold & Middle East: 11-Year Cycle in 2019/20 II”

Those highs fulfilled the latest phase of ~7, 13 - 14 & 27 - 29-week cycles while reinforcing the latest 54 - 59 week cycle (that projects a more significant peak in **March '20**) - peaking at its midpoint...

Silver turned its weekly trend down... However, Silver just spiked into its primary (multi-month) downside target at **16.50 - 16.80/SIZ**, fulfilling a larger-magnitude downside objective.

With both Gold & Silver now fulfilling critical downside targets, and Silver now due for a reactive 1 - 3 week bounce, the time is ripe for at least a multi-week low.

From a price/wave perspective, Silver's test of its **16.50 - 16.80/SI** downside target also has it attacking the highs of Jan. '19 - a pivotal level of 6 - 12 month 'resistance turned into support'...

Gold has also just fulfilled what was necessary to

complete successive, 10-week corrections (late-Feb. - early-May and early-Sept. - **Nov. 11 - 15**). It needs a daily close above **1474.5/GCZ** (and **17.18/SIZ**) to give the first sign of reversing higher.

The **XAU** remains more bullish and has pulled back to test and hold monthly support (**90.54 - 91.17/XAU**) and its daily 21 *Low MAC* support (**90.75/XAU**) as it perpetuated a 28 - 29 day low (Aug. 19) - low (Sept. 16) - low (Oct. 15) - low (**Nov. 12/13**) *Cycle Progression*.”
